REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the claims are allowable over the closest prior art to Bian et al. (US 6077586). Bian et al. teaches a thickness range of 10 – 200 Angstroms. A goal of the invention is to produce a magnetic recording medium exhibiting single switching behavior as argued by Applicant (i.e., no antiferromagnetic coupling). The prior art teaches that the thickness of the Ru layer affects the type of coupling between adjacent magnetic layers – i.e., ferromagnetic or antiferromagnetic- (see Parkin reference of record). However, Bian et al. is directed to a medium having single switching behavior so there is no motivation to modify the thickness of the Ru layer taught therein to achieve the claimed thickness of 3 to less than 10 Angstroms thereby achieving antiferromagnetic coupling. As such, the reference also fails to teach or suggest a structure having H_{ex} exerted by the upper ferromagnetic layer on the lower ferromagnetic layer and an antiferromagnetic interface exchange energy density J_{ex} .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
